CHAIRMAN & CEO ROBERT  
ANDERSON DISCUSSES

# THE COST OF A CYBER BREACH WITH THE AUSTRALIAN NEWSPAPER

## Hacked companies' next cost: staff lawsuits

JANE DEMPSTER

Robert Anderson Jr, in Sydney this week, says companies in the US that have been breached by hackers now find they are heading into a 'death spiral'

JOSEPH LAM

Company chairs and chief executives may soon find themselves being sued by their own staff.

That's the view of former FBI cyber investigator Joseph Lam.

ersonally identifiable information and their bank accounts are all compromised," he said.

"It really sends a corporation into a death spiral if you have not prepared for this." The cost of the breach is nothing – it might cost \$10, \$20m or \$30m – that

is what you can expect to pay for a breach of your company's data.

Australia on behalf of ASX-listed TechnologyOne, said in an interview with The Australian.

"In the United States now, when large breaches like this happen, within days if not hours there's class action lawsuits filed against the company."

He said that the cost of the company's data breach was not the only cost.

said. "In the last seven, eight years since I left the government, I hate to say that I think cyber crime is getting much worse."

Discussing the Optus hack, Mr Anderson said it showed the importance of investment in technology departments and cyber-defensive capability.

He said that the cost of the company's data breach was not the only cost.

Companies needed to understand that hacking data and selling it back to a company was a business, Mr Anderson said.

"I've been involved in thousands and thousands of breaches in the US and I've probably been involved in different companies' breaches."

He said that the cost of the company's data breach was not the only cost.
